

0-60 Points Quality Rating Scores

Each observation will receive points from 0-60. Since there are multiple observations, the points from each observation will be averaged together to obtain the quality rating score from 0-60 that will be reported to NYSED.

Scores from the multiple observations will be averaged, .5 or more, will be rounded up. (Example: 57 on observation one, 58 on observation two. Average 57.5 will round to 58 for final score).
